

Internet Traffic Information and Protection (Cisco Umbrella)

Last Modified on 03/23/2021 7:30 pm EDT

Provider: [Cisco Systems Inc](#)

Software designed to actively protect the network by constantly monitoring internet traffic via integrated secure web gateway, firewall, DNS-layer security, and cloud access security broker functionality. The software delivers visibility into internet activity across all locations, devices, and users, and proactively blocks requests to malicious destinations before a connection is established.

- [Cisco Umbrella](#)

Typical Use Cases

- An institution wishes to implement a solution that will block malware from getting into its network.
- An institution wishes to gain greater visibility and control of its network via intelligent web filtering.
